

I oppose any restrictions on Satellite radio providing local news, weather, traffic, or even local programming. I prefer to have the choice of listening to national/international/local programming. The currently licensed AM/FM programming should compete on quality of programming and clarity of signal, not by asking the FCC or Congress to protect their business. Throughout the history of this country, there has been disruptive technology that changed the face of business. The Luddites could not stop the march of better living through technology, and neither should the FCC or Congress make the attempt.
